

# Glass Renovator

For use in automatic glasswash machines

Low foaming liquid detergent for removing protein deposits, yeast, beer residue and bloom from drinking glasses.

Restores glassware to a clean & highly satisfactory condition.

Saves money by reducing the need to replace glasses.

- Specialised highly efficient product.
- Easier to use than powder renovators.
- Concentrated formulation, very economical in use.
- Will also clean the glasswash machine in the same operation.

#### GLASSWASH MACHINE:

After the normal cleaning of glassware, if water droplets are visible on the side of the glass it indicates that the glasses require renovating.

If a high active glass or dishwasher detergent is being used it is advisable to place feeder tube into a container of clean water & use machine 4 or 5 times in order to flush out the detergent, before connecting to the Glass Renovator.

Withdraw the feeder tube from the normal glasswash detergent & place it in the Glass Renovator. Operate through the electronic dispenser unit at a ratio of 1-3 ml per litre. Proceed to clean the glassware in the normal manner. Replace the feeder tube into the glasswash detergent when all glassware has been renovated.

It is advisable to renovate glassware on a monthly basis & is best carried out at a busy period, i.e. weekends, to ensure the product is completely pumped through the tubing to allow the majority of glassware to be treated at least once.

**NOT TO BE USED FOR HAND GLASSWASHING.**
